

Cobar's Easy-to-Use Cobrush for rework!

A precise, inexpensive and handy tool for applying liquid flux to tiny chip components as well as individual solder joints. Cobar's Cobrush flux applicator puts flux only where it is needed in just the right amount and is ideal for applying liquid no-clean fluxes to any site that needs to be soldered. It is disposable and compatible with many different types of fluxes.

It's fine bristle tip allow the user to apply flux to very small areas in densely populated assemblies. The flux is dispensed by lightly squeezing the barrel, then using the gentle applicator bristles to apply the flux, just like an artist's brush, which allows the user to control the amount of flux flow.
